Mississauga, ON | 647-771-9543 | Zayansyed0925@gmail.com | [LinkedIn](#) | [GitHub](#)

EDUCATION

Toronto Metropolitan University

Bachelor of Science in Computer Science

Toronto, ON

Expected Graduation: May 2030

RELEVANT COURSEWORK

Coursework: Object-Oriented Programming, Design Patterns, Data Structures and Algorithms, Databases, Computer Organization, Python Programming, Operating Systems, Machine Learning, Artificial Intelligence.

Experience

SciXchange, Toronto Metropolitan University

Robotics Instructor

September 2026 to Present

Toronto, ON

- Support hands-on **robotics education** and STEM outreach for youth.
- Guide students through **robotics activities**, introducing foundational concepts in technology and engineering.
- Explain technical concepts in clear, accessible language and help students work through activity steps.

Rowdah Center

Developer

May 2026 to August 2026

Mississauga, ON

- Worked with a development team to design a centralized **Smart Donation Kiosk System** to replace manual Excel-based donor record management.
- Reviewed the manual tracking process and identified risks involving data loss, accuracy, and processing efficiency.
- Designed kiosk and QR-code workflows for cash, card, and online donations, including automated transaction records and digital receipts.
- Mapped how frontend and backend services, **payment APIs**, **cloud storage**, and donor and transaction records connect.
- Documented security requirements including automated backups, **encryption**, **role-based access**, and anonymous donations.

Projects

Space Mission Dashboard

- Designed a searchable dashboard concept for past and upcoming NASA and SpaceX missions, showing launch dates, rockets, and mission goals.
- Specified mission detail views with flight paths, weather context, and outcomes such as successful landings or mission failures.
- Outlined **Docker** containerization, **AWS** deployment, and **GitHub Actions CI/CD** to automatically test and deploy updates.
- Planned integration with **spaceflight APIs** to retrieve and display mission details, launch information, and real-time updates.

NHL Stats Analyzer | *Python, HTML/CSS/JS*

- Designed a dashboard concept for comparing historical NHL team and player statistics.
- Outlined a **Python** data backend, interactive browser visualizations, and optional **AI-powered stats Q&A**.
- Planned integration with NHL data sources to retrieve and organize player, team, and game statistics.
- Designed filtering and comparison features to analyze player performance and team trends across seasons.

TECHNICAL SKILLS

Languages: Python, JavaScript, HTML/CSS

Frameworks: React, Node.js

Databases: Firebase, MySQL

Developer Tools: Git, GitHub, VS Code

Other: REST APIs, System Architecture, Version Control
